The income tax expense for the first quarter of 2020 is calculated using the tax rate that would be applicable to the expected profit before tax for the whole year, i.e. using the estimated average annual effective income tax rate applicable to income before tax in the interim period.

In order to calculate the average annual effective income tax rate, the forecast income before tax for the whole financial year and the permanent differences between the carrying amounts of assets and liabilities and their tax bases must be used. The forecast annual effective tax rate used to calculate the income tax expense in the first quarter of 2020 was 35.71%.

#### 32. LIQUIDITY RISK MANAGEMENT

#### 32.1 LIQUIDITY RISK MEASUREMENT AND ASSESSMENT

The Bank applies the following liquidity risk measures:

- contractual, actualized and stress-test liquidity gap;
- liquidity surplus and survival horizon;
- regulatory liquidity measures:
  - M3 Non-liquid assets to own funds;
  - M4 Non-liquid assets and assets with limited liquidity to own funds and stable external funds ratio;
- short-term liquidity measure:
  - Liquidity coverage ratio (LCR) the coverage ratio of net outflows up to 1 month;
- the concentration of funding sources;
- coverage ratio of long-term assets with long-term funding;
- the liquidity stress tests.

The actualized liquidity gaps as at 31 March 2020 and as at 31 December 2019 are presented below.

| LIQUIDITY GAP AS AT 31.03.2020   | on<br>demand | 0 - 1<br>month | 1 - 3<br>months | 3 - 6<br>months | 6 - 12<br>months | 12 - 24<br>months | 24 - 60<br>months | over 60<br>months |

As at 31 March 2020, in the bands up to 12 months, the cumulative adjusted liquidity gap has positive values, which means a surplus of maturing assets increased by estimated inflows from available overdraft limit over mature liabilities in the short and medium term.

| LIQUIDITY GAP AS AT 31.12.2019   | on<br>demand | 0 - 1<br>month | 1 - 3<br>months | 3 - 6<br>months | 6 - 12<br>months | 12 - 24<br>months | 24 - 60<br>months | over 60<br>months |

The liquidity surplus is determined with account taken of outflows of funds under stress conditions. The survival horizon means the time during which the Bank will see a surplus of inflows over outflows under stress conditions.

A liquidity surplus comprises liquid assets (consisting of the main part aimed at providing protection from the most acute crises, and the supplementary part providing protection from less acute, but longer lasting crises) adjusted for net stress test flows (outflows less inflows) over a 30-day horizon.

| Liquidity surplus in a horizon of up to 1 month | 2,045,048  | 1,605,939  |

The Bank monitors all mandatory liquidity standards specified in the Resolution of the PFSA 386/2008 dated 17 December 2008. The values of liquidity standards binding as at 31 March 2020 and 31 December 2019, as well as the average, minimum and maximum values during the reporting period are shown in the following table:

#### 32.2 LIQUIDITY RISK CONTROL

The control of liquidity consists of determining strategic tolerance limits appropriate for the scale and complexity of the Bank, and internal liquidity risk limits for short-, medium-, and long-term liquidity, which are monitored, and if overrun, the Bank initiates management actions.

#### 32.3 Liquidity risk forecasting and monitoring

The liquidity risk exposure of PKO Bank Hipoteczny SA as at 31 March 2020 and 31 December 2019 was within the strategic and internal limits set. In the period ended 31 March 2020 and in the period ended 31 December 2019 the Bank did not exceed any of the standards or any strategic or internal limits.

The Bank regularly reviews the business assumptions which may have a material effect on the projections of liquidity risk measures. Forecasts of the basic liquidity risk measures are prepared periodically and on an on-going basis and these are juxtaposed with the internal limits.

#### 32.4 Liquidity gap in the presentation of contractual cash flows

The liquidity gap in the presentation of contractual cash flows is a mismatch between the inflows and outflows classified in a given range. In the calculation of liquidity gap relating to cash flows, the Bank takes into account all instruments concluded as at the balance sheet date. An increase in the amount of loans granted or rolling over of financing for a consecutive period is not taken into account. It is assumed that the funds available under the existing credit lines will be utilized.

#### 32.5 Concentration of funding sources

The Bank recognizes the risk of concentration of funding sources, as an element of liquidity risk, determined by circumstances under which the funding structure becomes susceptible to the occurrence of individual events or single factors, such as sudden significant withdrawal of funds or insufficient access to new funding.

The following table presents the structure of the Bank's funding sources:

| STRUCTURE OF THE BANK'S FINANCING | 31.03.2020 | 31.12.2019 |
|-----------------------------------|------------|------------|
|                                   |            |            |
| Mortgage covered bonds issued     | 60.9%      | 59.6%      |
| Funds from the parent             | 16.7%      | 16.7%      |
| Unsecured bonds issued            | 14.0%      | 14.9%      |
| Equity                            | 7.0%       | 7.3%       |
| Other                             | 1.4%       | 1.5%       |
|                                   |            |            |
| Total                             | 100.0%     | 100.0%     |

The share of funding raised from the parent entity amounted to 16.7% as at 31 March 2020 and also as at 31 December 2019. Such level of the indicator is consistent with the financial plan at the current stage of the Bank's operations. The funding concentration risk is assessed as acceptable.

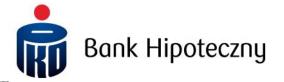

Seeking to reduce the concentration risk of funding sources, the Bank has implemented a system of internal limits, both in short-term and long-term horizons, according to the mortgage covered bond issues carried out by the Bank. In the period ended 31 March 2020 and 31 December 2019 none of these limits were exceeded.

#### 33. Interest rate risk management

#### 33.1 Interest rate risk measurement and assessment

The repricing gap report presented below includes assets and liabilities and financial liabilities granted which are sensitive to changes in interest rates. They do not include contingent liabilities which are insensitive to interest rate risk, the Bank's own funds, deposits from banks in the form of current account balances and current account overdrafts.

#### 34. FOREIGN EXCHANGE RISK MANAGEMENT

The following table presents the Bank's currency position.

| FOREIGN CURRENCY POSITION IN PLN'000 | 31.03.2020 | 31.12.2019 |

| EUR                                  | 70         | 86         |
| USD                                  | 8          | 4          |

The foreign exchange risk exposure of PKO Bank Hipoteczny SA as at 31 March 2020 and 31 December 2019 was within the strategic and internal limits set.

#### 35. OPERATIONAL RISK MANAGEMENT

In the three-month period ended 31 March 2020, 12 operational risk incidents were disclosed at the Bank, which involved operational losses totalling PLN 9 thousand whereas in the three month period ended 31 March 2019 there were 5 incidents with a financial loss of PLN 1 thousand.

In order to limit losses arising from operational risk, the Bank applies ad hoc and systemic management measures. Ad hoc measures include a direct response to the identified risks, eliminating reversible irregularities and recovering losses.

#### 36. Capital adequacy and the management of capital risk

At 31 March 2020, the total capital ratio of the Bank amounted to 17.0% (as at 31 December 2019: 16.6%). Without taking account of the temporary solutions resulting from the implementation of IFRS 9, the total capital ratio of the Bank would have amounted to 16.8% (16.5% as at 31 December 2019).

On 19 March 2020 the Minister of Finance signed a regulation abolishing the systemic risk buffer, of 3%, thereby lowering the regulatory requirements concerning the total capital ratio (TCR) to a level of 10.5%.

#### 36.1 Own funds for the purpose of capital adequacy

The Bank's own funds for capital adequacy purposes have been calculated in accordance with the Banking Law and the CRR with implementing legislation.

The Bank's own funds consist entirely of core Tier 1 capital (CET 1). In determining its own funds, the Bank makes use of the transitional provisions following from the implementation of IFRS 9.
