Press Release

Licence Extension and Amended Work Commitment in Romania

Jersey, Channel Islands, 13 October 2020 -- Serinus Energy plc ("Serinus", "SEN" or the "Company") (AIM:SENX, WSE:SEN) announces that it has received approval in Romania from the National Agency for Mineral Resources ("NAMR") to amend the last outstanding work commitment for the third exploration phase of the Satu Mare Concession. In addition, NAMR has granted a 12-month extension to the work commitment due to the COVID-19 related disruptions, with the new exploration phase now expiring on 27 October 2021. A further extension, corresponding to the duration of the Romanian "State of Emergency/State of Alert", will be added to the extension once the COVID-19 related "State of Emergency/State of Alert" has been lifted.

The Company had previously chosen the option of conducting a 120 km² 3D acquisition programme as the third and last work commitment for this exploration phase. As of the beginning of March, the Company had permitted a 148 km² 3D programme area in the Bervenii area just north of the Moftinu gas plant. The Company had reached land access agreements with all landowners within the seismic acquisition area and was in the process of mobilising the seismic equipment and staff. This mobilisation was postponed due to the uncertainty regarding the COVID-19 pandemic, and the State of Emergency issued by the Romania Government on 20, March 2020 that restricted the ability to travel and procure services in Romania and Satu Mare County.

Given the delay in the programme caused by the continuing COVID restrictions in Romania the Company approached NAMR and requested modifications of the work commitment. NAMR has accepted the Company's proposal to modify the final work commitment to drill two exploration wells, one to a total depth of 1,000m and a second well to a depth of 1,600m.

The first well, Moftinu-1008, has been permitted, surface preparation work has commenced and is expected to be spudded in early January 2021. It will be drilled to a depth of 1,000m into the producing Moftinu structure and is expected to intersect three proven gas-bearing sand formations and two additional untested sand formations. Upon success, the Moftinu-1008 will be tied into the Moftinu gas plant through a 1.5 km flowline for processing and sale.

The Company expects the second planned well to be drilled into the Sancrai structure directly to the south of the Moftinu field. The previously completed Santau 3D seismic programme, conducted in 2013, highlighted the prospectivity of this structure. Reprocessing of legacy 2D lines over the remaining area of the structure has demonstrated structural closure with AVO processing showing bright amplitudes

consistent with a gas-bearing reservoir. This well is expected to be drilled to 1,600m. The spud date has not yet been established but it is expected to be in mid-2021.

Competent Persons Statement

In accordance with the AIM Rules for Companies, the technical information contained in this announcement has been reviewed and approved by Mr. Andrew O'Donovan, Chief Operating Officer of Serinus Energy plc. Mr. O'Donovan is a qualified person as defined in the London Stock Exchange's Guidance Note for Mining and Oil and Gas Companies and is a specialist with professional and technical competencies to conduct petroleum operations. Mr. O'Donovan has thirty-two years of operational experience both as an exploration geophysicist and as a petroleum engineer. Mr. O'Donovan began his career as a geophysicist with BP plc and during his 21 years with BP he worked in regions as diverse as Vietnam, China, Angola and the North Sea.

About Serinus

Serinus is an international upstream oil and gas exploration and production company that owns and operates projects in Tunisia and Romania.
